Can you tell us about Digivaxc?

Digivaxc stands for Digital Vaccine Certificate or Digital Health Wallet.

How did this idea of Digivaxc came across your mind? What made you develop this?

When my personal life got disrupted due to the pandemic in Q1 2020, among millions in the US and billions worldwide, I got the vision of developing a digital vaccine certificate. I felt the need to restore my life and also help millions of lives impacted by the pandemic, and so I wanted to give people an easy & secure way to store their vaccination record, access it and share it across multiple vendors whosoever may need to validate one's Covid-19 vaccination, that also includes Covid-19 test results. Goal was to help society (consumers, businesses, Govt entities) restore a sense normalcy in our personal lives, businesses to resume ops and society could slowly limp back to pre-pandemic levels. Digivaxc would be that glue to bring life back together for all the stakeholders.

What is the difference between digital vaccine health passport and digital vaccine?

A digital vaccine certificate is a digital record of one's vaccination certificate, same as a digital vaccine passport as it allows for certain orgs, vendors, institutions to validate it and give you access to their business premise, much like a passport does when you travel between country to country, hence the concept of a 'Digital Vaccine Health Passport'.

Can digital vaccine health passport be applicable for other diseases as well other than COVID-19?

Yes, that's the whole purpose of Digivaxc to serve agnostically, besides Covid-19, for any and all vaccinations and related test results.

How does digital vaccine health passport help consumers, government, and businesses?

All these three all important stakeholders in the smooth functioning of a normal society, that was pre-pandemic. During the pandemic, pretty much everything came to a standstill impacting lives for consumers, businesses, and Govt entities (Federal, state & local). By using Digital Vaccine Health passport, consumers, businesses and Govt entities could get normalcy back in their personal, business lives & org lives. People would feel safe using Digivaxc, knowing that they are among fully vaccinated popula-

tion, hence the concept of a 'Safe Citizen' bubble at work, at social events, among family friends. Life could get normal again post pandemic!

How can digital vaccine health passport and digital vaccine be accessed?

Digivaxc Webapp & mobile app via the Digivaxc QR code on the website digivaxc.com

What factors are driving the growth of digital vaccine health passport and digital vaccine?

Health data mining continues to be a puzzle to solve and its consequential benefits to the imp stakeholders- users, healthcare benefit provider and insurance firms & govt entities, are ever evolving in search of a better experience for users, a more efficient healthcare ecosystem and ultimately a better health outcome for users.

What are the key factors restraining the growth of digital vaccine health passport and digital vaccine?

Funding, US regulatory environment and clashes between US businesses, local, state & federal agencies. A vaccine passport became very controversial as some groups opposed it use while others promoted it along political lines and affiliations.

How do you foresee the future of digital vaccine health passport and digital vaccine?

Bright as we are now pivoting it as a 'Digital Health Wallet' to store one's healthcare related information, access it safely over the mobile app, and securely share it with any healthcare benefits and insurance entity, vendor etc while the user maintains full control over their personal health data. This would include any and all healthcare records pertaining to medication, vaccines, test results, lab reports etc. It's fully portable and secure per US HIPAA regulations.

ABOUT TECHSCI HEALTHCARE

TechSci Healthcare vertical offers market research & consulting services in the healthcare industry with a major focus on pharmaceuticals, medical devices, consumer healthcare, animal healthcare, biotechnology, and healthcare IT domains. TechSci Research also focuses on providing market intelligence on emerging technologies and niche industries that have the potential to cause a high level of disruption in the market in the next few years. We excel in conducting market viability analysis for technologies that are still in the nascent stages of their lifecycle.
